

Dynamic Vacuum Electric Inductor DVEI

Amrit Sorli Srečko

Free energy out of the vacuum is one of the main goals of today physics. The vacuum is full of free electrons, the only question is how to catch them in a given area of the vacuum. Once we have an area with a higher concentration of the electron, we have electric induction of the vacuum, we have electricity.

All physicists interested in the project,
contact me here on RG.

We will build an international research team of DVEI.

Our goal is energy extraction from the vacuum.

Let's our dream become true.

Here is the brief video on

Dynamic Vacuum Electric Inductor
